## Software Projects

**Personal Website:** www.eriklopezalfaro.com (for additional information)

**YDS Professional Cleaning Services Website**          **June 2022**

- Developed and deployed a business website for a local cleaning services company based in Bellevue, WA.
- Built a full stack website using HTML5, CSS3, Python, and the Django Framework.
- Used SMTP to send emails made of data that potential clients provided through the form in the contact page.

**Terminal Chatroom Application**          **May 2022**

- Created a chatroom application using Python that allows multiple users to connect to the same chatroom server using a client-side script.
- Used socket and threading modules that are part of Python's built-in libraries.
- Utilized ANSI escape codes to decorate the chatroom messages, each user is assigned a unique color for easier differentiation.

**A Hero's Journey Game**          **May 2022**

- Developed a text-based terminal game using Python that allows the user to navigate the world as a hero through a series of command prompts.
- Designed the game using Object-oriented programming (OOP) principles for all objects that interact together (e.g. actors, weapons, locations).

## Employment

**Kent, WA**          **Shipper/Customer Service, TA Supply Co.**          **March 2018-Present**

- Provided detailed flooring samples for our sales team, product partners, and customers.
- Pull, process, stage, and ship 600-1200 flooring samples a week while making sure samples pass QA.
- Successfully manage 30 different routes a week making sure each route has all sample orders staged and ready for our representatives' and customers to receive at their respective branches in a timely manner.
- Exceptional service to all clients and partners helping maintain and improve professional business relationships, this includes efficiently helping find correct flooring samples to match the needs of their project.
